

# HARNESS KNOWLEDGE & EMPOWER TEAMS

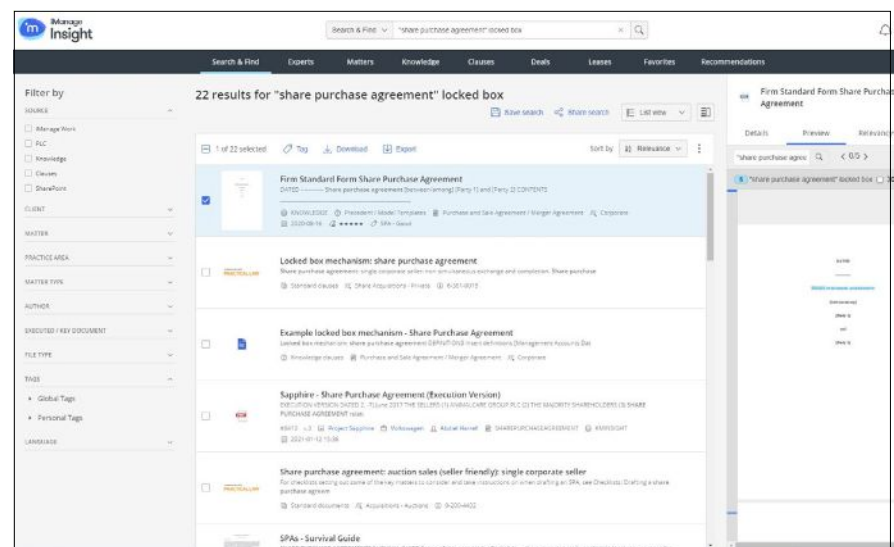

## Key Benefits

- **Increase search utilization** – Build connections across people, systems, and content to receive highly relevant and accurate search results right at your fingertips
- **Deliver highly relevant search experiences** – Discover the best knowledge and content no matter where it's stored, and reuse best practices all with a single search
- **Leverage collective knowledge** – Mine best practices, leverage expertise, and easily find legal content with intelligent access to your firm's latest thinking and market insight
- **Make faster, higher-quality decisions** – A single highly relevant & accurate search that discovers the best knowledge and content no matter where it's stored
- **Effortlessly Respect Security** – No matter how complex your privacy and security requirements, our solution scales and supports knowledge sharing even in the most restricted need-to-know environments
- **Improve ongoing performance** – Retain data to enhance a clause library, corporate templates, and best practices in order to capitalize on learnings and reduce re-work

Teams excel when they have easy access to the right information, in context, when they need it. iManage Insight makes it simple to connect and surface information to leverage best practices, locate experts, and highlight the latest legal practice unlocking your team to bring the best of the firm to every interaction.

## Key Features

Insight enables users to go beyond simple full text searching to discover new content, identify similar matters or motions, highlight relevant content, and provide updated intelligence while respecting security and privileged access that is so important to the industry. With Insight as the foundation for knowledge sharing and re-use across the enterprise, teams advance their own knowledge to provide higher-quality responses, leverage expertise in every answer, and make informed decisions that ultimately provide high-quality service.

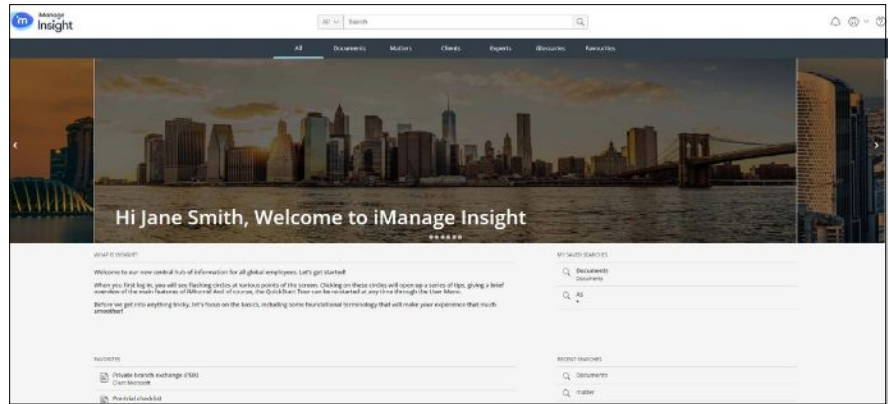

## Modern Search and Find

Preconfigured search experiences support full-text search queries and natural linguistic search against document text with the ability to easily switch context across matters, experts, and other best practices as users search and explore. 'More Like This' functionality, real-time predictive text, and the ability to join queries together makes it easy to find exactly what users need to get answers – not just search results.

## iManage Platform

The iManage platform delivers an optimal user experience on a modern architecture that makes it easy to deploy and speeds adoption allowing customers to realize value quickly. The iManage APIs and library of connectors enable integration with 3rd party sources seamlessly while still respecting industry leading security and governance.

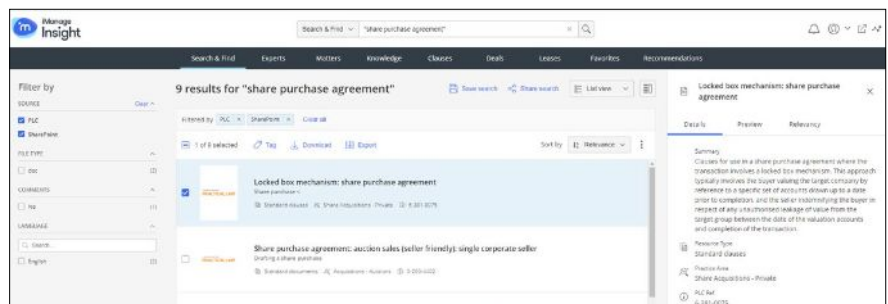

## Personalized search

Search recognizes information about the user, such as practice area or active matters, and prioritizes search results most likely to be of interest. Customizable ranking algorithm and relevance tuning allow users to weigh results and puts the power in the hands of the users to focus on the task at hand to quickly get answers and spend less time searching.

## Knowledge Search

Classification and auto-profiling uses machine-learning algorithms, data relationships, and social interactions to build connections and surface information to identify expertise and other relationships in the Knowledge Graph. This is powerful as it fuels knowledge search which allows users to find content they never thought to look for and exposes insights that are less meaningful in isolation.

## Extensible Connector Framework

Create a single entry point into an organization's valuable information, analytical data, and other knowledge where the work happens by building connections to index and organize the data into a single search and knowledge experience. Search across multiple Work libraries in one tab and connect to leading legal technology solutions such as Foundation or Practical Law to enrich content with metadata, and push data downstream for further review and analysis.

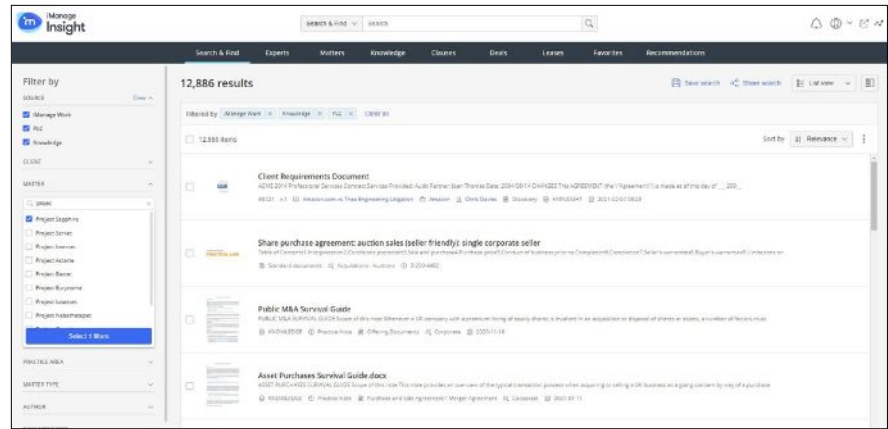

I don't think knowledge search is about solving specific problems, it's more about enabling discovery of the facts.

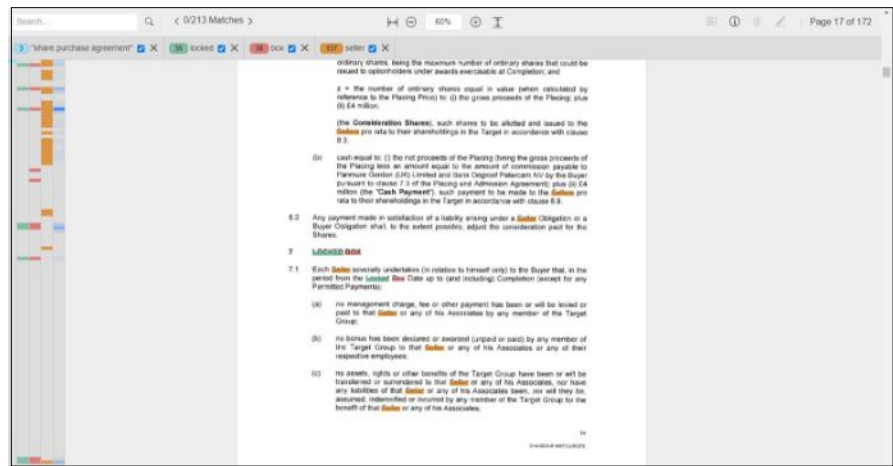

**Jamie Pilgrim**

Senior Knowledge Systems Manager, Linklaters

### State-of-the-art faceting

Knowledge search allows users to narrow down search results by applying multiple filters based on classification of the items making it easy to refine search results. With the granular filtering capabilities users are better equipped to tune the results, using tooltips and the smarter 'apply' button, for faster, more contextually accurate search results.

### Advanced Previewing

Designed with the workflow in mind, advanced previewing with heatmaps makes it easy to preview, interact, and view insights, contextual metadata and content related to search results before you open them making it easy to explore and discover new material or insights efficiently.

### About iManage™

iManage is the company dedicated to Making Knowledge Work<sup>®</sup>. Its intelligent, cloud-enabled, secure knowledge work platform enables organizations to uncover and activate the knowledge that exists inside their business content and communications. Advanced Artificial Intelligence and powerful document and email management create connections across data, systems, and people while leveraging the context of organizational content to fuel deep insights, informed business decisions, and collaboration. Underpinned by best of breed security, sophisticated workflows and governance approaches, iManage has earned its place as the industry standard through continually innovating to solve the most complex professional challenges and enabling better business outcomes for over one million professionals across 65+ countries.
